Environmental Policy

Hastema is committed to carrying out its activities in the areas of development, design, manufacturing, and service in an environmentally conscious and sustainable manner. This commitment is part of Hastema's integrated management system according to DIN EN ISO 9001 and 14001.

We commit to

- Avoiding environmental impacts and pollution.
- Using energy, raw materials, and operating resources efficiently.
- Reducing waste and promoting recycling.
- Complying with all applicable environmental laws and other binding obligations.
- Considering environmental aspects in development, procurement, production, and logistics.
- Sensitizing and training employees for environmentally friendly actions.
- Continuously improving our environmental performance through measurable goals and regular reviews.

Operational Measures

- We try to reduce paper consumption as much as possible.
- Our correspondence is mostly digital.
- Water is a valuable resource, so we try not to waste it through unnecessary consumption.
- Plastic does not fit into our environmental concept, which is why we limit the consumption of PET as much as possible.
- We minimize unnecessary journeys as much as possible and prefer train and bicycle over the car.
- We strive to use clean energy to help prevent global warming.
- All our employees pursue the same goal.

To implement this policy, we set annual environmental targets, for example, to reduce energy consumption, decrease production waste, or optimize material usage.

This environmental policy is communicated to all employees and made available to interested parties.
